

Spring / mid-year intake sweep — shared instructions

Read `/home/user/master/output/AGENT-BRIEF.md` FIRST for the candidate profile, the evidence rules, the RUCT tooling and the blocked-domain list. This file adds only what is specific to this question.

The question

Which master's programmes in Spain admit a cohort that STARTS between January and June, rather than the September/October norm? For each: the exact start month/date, how many intakes a year, and the application deadline for that spring intake.

Why it matters: the candidate targets September 2027. A February or April 2027 start would let them begin **six to eight months earlier**; a February 2028 start is a fallback if a 2027 autumn application fails. Both change the plan materially.

Scope

The nine fields from the main brief (A sound/music computing · B MIR/AI-for-music · C signal processing/acoustics · AA artificial intelligence · AB data science · AC cloud/DevOps · X business analytics · P music industry · S events/live).
Include BOTH `máster universitario` and `título propio` — flag which, per the three-way distinction in the main brief.

×

What counts, and what does not

Counts: a genuine second cohort starting Jan–Jun (e.g. IE's 9 February and 20 April starts; VIU's April intake; UCJC's February online intake).

Does NOT count: rolling admission with a single autumn start · an application window that merely opens in spring · a January application deadline for a September start · "segundo cuatrimestre" module entry that is not a real cohort start.

That distinction is the whole job. Many pages advertise "several convocatorias" meaning application rounds, not start dates. **Read for the START DATE, not the deadline.**

Vocabulary

`inicio febrero` · `inicio enero` · `convocatoria de febrero` · `segunda convocatoria` · `doble convocatoria` · `inicio abril` · `matrícula de primavera` · `spring intake` · `February start` · `January intake` · `dos convocatorias al año` · `inicio: octubre y febrero` · `edición de primavera` · `Catalan inici febrer`, `matrícula de primavera`.

Output — append AS YOU GO, one JSON per line

Write to the file named in your prompt. Never batch writes to the end: session limits have repeatedly killed agents holding finished work.

```
{ "institution": "", "programme_name": "", "path_codes": [], "official_status": "", "ruct_code": "",
"spring_intake": "YES|NO|NOT FOUND", "start_date_verbatim": "", "start_month": "",
"intakes_per_year": "", "other_intakes": "", "application_deadline_for_spring_intake": "",
"modality": "", "language_of_instruction": "", "tuition_total_eur": "", "url": "",
"evidence_verbatim": "", "notes": "", "sources": [ { "field": "", "url": "", "accessed": "YYYY-MM-DD" } ] }
```

Record NO as well as YES. A checked institution that runs only one autumn intake is a useful result and stops the next pass re-checking it. NOT FOUND where the page does not say. Never infer a spring intake from the existence of a spring application round.
