

Spain Master's Sweep — resume state

Brief: output/BRIEF-original.md · **Shared agent brief:** output/AGENT-BRIEF.md

Branch: claudes/new-session-40ht82 · Updated 2026-08-25.

Where the sweep stands

Wave	Status
1 Discovery	DONE — 19 of 20 slices landed, 970 unique candidates in output/raw_candidates.jsonl
RUCT backbone	DONE — 1,056 registered titles, 561 active, output/ruct-backbone.jsonl
RUCT detail	DONE — 561 detail pages, 0 errors, output/ruct-detail.jsonl
2 Enrichment	round 1 running: 12 agents x 15 = 180 highest-priority candidates
3 Funding	7 blocks running (all died once to a session limit; relaunched)
Enseñanzas Artísticas	running — the register RUCT cannot see
4 Verification	not started
5 QA & assembly	not started

Candidates per path code: {'?': 6, 'A': 84, 'AA': 192, 'AB': 173, 'AC': 140, 'B': 24, 'C': 82, 'P': 84, 'S': 103, 'X': 152}

The scale problem, stated plainly

970 candidates x 4 pages each is ~3,880 page fetches. That does not fit one enrichment round. Round 1 takes the **180** where enrichment most changes the answer (active official title, core field, corroborated by two discovery axes, real URL). The remaining **790** are parked in output/deferred_candidates.jsonl — parked, not dropped, and gaps.md must say so.

Hard limits found in this environment (do not re-litigate)

- **20 concurrent subagents.** Waves are sized to it.
- **~200 tool calls per agent;** several wave-1 agents hit it mid-slice.
- **Session-wide usage limit** killed 11 agents at once on 2026-08-24 ~23:40 UTC. Agents are now told to write results incrementally rather than hold them.
- **No JS-capable fetch exists here.** Chromium cannot reach the session proxy for ANY host. Cloudflare-blocked domains (upf.edu, www.ub.edu, unir.net, il3.ub.edu, pointblankmusicschool.com, imep.es, ucjc.edu) are a hard limit, not a retry. See output/logs/blocked-and-redo.md.

Corrections to the brief established by evidence

1. **Rule 6 is wrong for one category.** Máster en Enseñanzas Artísticas is official and absent from RUCT. Three-way distinction now documented in AGENT-BRIEF.md.

2. **The 300-ECTS premise is inverted in the business/events fields.** UB/CETT and UOC impose bridging credits on non-social-science entrants; no programme yet found grants advanced standing for the extra credits. It is an asset in the technical fields only.
3. **Non-EU surcharge is the norm for public universities, not the exception** — confirmed at UAM, UPC, UC3M, UB, UAH, UVic. Roughly double in several cases.

How to resume

1. `ls output/wave2/*.jsonl output/wave3/*.jsonl` — anything present is DONE.
2. Re-dispatch only missing slices; prompts reconstruct from the slice name + `AGENT-BRIEF.md`.
3. `python3 .masters-search/spain/make_wave2_batches.py 15 <N>` for the next enrichment round (reads `raw_candidates.jsonl`; re-point at `deferred_candidates.jsonl` for round 2).
4. Then wave 4 verification, then `python3 .masters-search/spain/build_deliverables.py`.
