

File index — what every file is, and when to open it

All five workbooks are now real Excel Tables. Every sheet has sticky filter buttons with a search box in each dropdown, banded rows, frozen identity columns, and single-line rows so a screen shows ~30 programmes instead of 6. Click any header arrow to filter or search that column.

Everything produced by this search, in one table. **PDFs are in pdf/ ; spreadsheets and markdown are in results/ .**

The interactive version

<code>console.html</code> — <i>The Console</i>	Three modes. Picks leads with the 18 that survived verification, as cards, plus the three things worth doing this month. Explore is the full 1,091 with nine filter groups, live counts, search, sort and keyboard navigation. Shortlist is whatever you star, compared side by side — saved in your browser, no account. Any row opens a full record with every field and a link to the official page. Filtered views are shareable by URL. Works offline.

| 1,091 unique rows (read this first)

| 0 records lost

1,262 raw records each search also kept its own report:

EUROPE-GAPFILL · PRIVATE-SCHOOLS · SOUND-DESIGN-EUROPE

The three regional reports hold **more per-record detail** than the master file carries — full verification notes, complete fee breakdowns, portfolio specifications. The master file is for **deciding**; the regional files are for **checking a specific programme in depth**.

If you only have 20 minutes

1. THE-COMPLETE-GUIDE.pdf the section "**What verification actually found**"
2. MASTER-all-opportunities.xlsx tab ** BEST BETS **filter** Taught in = English or French**

That is your real shortlist.
